- Targeted Node License options
- Unlimited Remote Users

Secure Network maintenance has been bypassed for many years by the Internet generation...till now that is. The new Xceedium XIO suite of products allows technical staff to work on any network device or server via the console port or via KVM and to manage the server farm power requirements from any Java enabled 128 bit browser, anywhere in the world...securely.

All this is done via a browser with no additional software on the client side. All connections are secured via SSL including plain text protocols and inband services such as SSH, Telnet, VNC, Terminals Server and Citrix etc can be handled via the Java applets loaded when the technician signs on.

For full details and to arrange a demonstration please contact our sales team on 01483 405010 or email sales@kvmchoice.com and a representative will contact you direct.

Benefits
